FOR IMMEDIATE RELEASE

Colo Atl Receives SSAE 16 Certification

This Certification provides quality assurances necessary to compete as a global data center and neutral colocation facility

Atlanta, June XX, 2012 – [Colo Atl](#), a leading provider of neutral colocation, data center and interconnection solutions, announces today it has received the SSAE 16 certification. The SSAE16 certification replaces the current standard for reporting on controls at a service organization, the SAS70. This certification signifies that Colo Atl meets, and in most cases, exceeds the requirements for controls and safeguards when hosting its clients' data.

Obtaining the SSAE 16 certification also signifies that Colo Atl is up to date with new international service organization reporting standards, the [ISAE 3402](#). This transition from the SAS70 Type 2 to [SSAE16](#) will help Colo Atl and its collocated customers compete on an international level as it provides 3rd party accreditation on critical controls and reporting, which are mandatory when working with international companies.

Established in November 2001, the fully built out infrastructure of the Colo Atl colocation and [Meet Me Room](#) (MMR) facility is located on the 5th and 8th floors of 55 Marietta Street in downtown Atlanta, Georgia. The Colo Atl facility provides a dedicated working environment to its 70-plus tenants and carriers and was built on a "customer first" philosophy.

"As we expand to provide colocation and interconnection to more global tenant and carrier providers, we're thrilled to be able to confidently say that our facility is comparable to the best in the world," states [Tim Kiser](#), Owner and Founder of Colo Atl. "The latest enhancement to the SSAE 16 certification is Colo Atl's promise to our current and future tenants, and customers, which is to provide the best possible colocation and interconnection services possible, complete with having met the strictest of safety and security standards."
